

Pre-filters that look at the image catch harmful memes sooner than one that reads only the text

Three fast pre-filters · 120 hand-checked memes (half harmful)

Each line is a fast pre-filter. Moving right, it passes more of the memes to the AI judge; moving up, more harmful memes get through to the judge. Higher and further left is better. The dotted line marks half of the memes. The image-only pre-filter is the one used in the two-step system.
