

# Seeing the image adds little: the text written on the meme does most of the work

Four open-source AI models · 120 hand-checked memes

Same 120 memes. Light blue: the model only read the text written on the meme. Blue: it also saw the image. Bars show the accuracy score (F1, 1.0 = perfect); black lines show the uncertainty range. 50 of the 60 harmful memes contain an explicit word, so this test mostly measures reading the text.
