

Student filter (DEV recall 95 / 97 / 99 %) in front of Qwen v3: recall kept, share of images sent and time per image.

Left: no error bar = CI not available (IC non disponible). Qwen v3 alone sends 100 % of the images by definition. sv_images_v1 is 50 % positive: the filter must pass at least half of the images, which caps the speed-up.
